Abstract. Health systems globally are undergoing significant changes. New systems are emerging in developing countries where there were previously limited healthcare options, existing systems in emerging and developed economies are under significant resource pressures and population dynamics are creating significant pressures for change. As health systems expand and intensify, information quality and timeliness will be central to their sustainability and continuity. Information collection and transfer across diverse systems and international borders already presents a significant challenge for health system operations and logistics. Geographic information science (gisience) has the potential to support and enhance health informatics in the coming decades as health information transfers become increasingly important. In this article we propose a spatially enabled approach to support and increasingly globalised health informatics environment. In a world where populations are ageing and urbanising and health systems are linked to economic and social policy shifts, knowing where patients, diseases, health care workers and facilities are located becomes central to those systems operational capacities. In this globalising environment, health informatics needs to be spatially enabled informatics.

Keywords. Gobar, ageing, modelling, gisience, spatial, visualisation

Introduction

The developing economies of Asia, South America and, to a lesser extent, Africa are all seeing significant changes to their established health care systems. These changes include the emergence of rapidly expanding public and private healthcare systems, medical insurance schemes, long term care systems and a massive expansion in aged care as well as skilled migration internally and internationally. Population ageing is driving major changes in the healthcare systems of the developed world and in many emerging economies because it is increasingly a global demographic trend [1]. This means that health information systems are in a phase of expansion, diversification and interconnection [2]. The globalisation of health information systems has important implications for the quality, safety and effectiveness of health services in this dynamic and rapidly changing environment.

¹ Corresponding Author: e-mail: h.robertson@neura.edu.au.

In this paper we briefly explore how the integration of spatial concepts, methods and technologies has the capacity to enhance and support a globalising health informatics paradigm. The broad interdisciplinary field of the spatial sciences is highly information focused. A major issue for those sciences over the past few decades has been the issue of revising and integrating their information paradigms as the context of their theories and practices became increasingly interconnected and internationalised. This form of globalisation has had a significant impact on the way in which important information management concepts and practices have developed. Firstly, data collection is increasingly collected with geospatial indexing attached (georeferencing) which contextualises that data at both a local (collection site) and a global level (e.g. latitude, longitude and altitude). Secondly, significant metadata issues have undergone a process of inquiry, revision and restructuring in order to ensure that data interchange practices facilitate this local to global transformation and to support the complex research issues we are dealing with at a local-global level (e.g. climate change phenomena). Thirdly, the type and variety of user interfaces has expanded enormously and in ways that increasingly permit non-expert use and application of georeferenced data (e.g. Google Maps and Google Earth). Lastly, this drive towards a broadly accessible spatial informatics paradigm is producing its own innovation drivers that increasingly seek to connect those older data paradigms with these new theories and methods [3].

1. Methods

The scenarios presented here are case studies developed by the authors as part of their research programmes in the fields of spatial science and health informatics. They only illustrate the potential of the premise we are exploring – that is, the integration of a giscience perspective to a globalising health informatics environment. As such they are developmental studies and not the endpoints of a defined or funded research programme.

In the first instance we applied this kind of approach to Australia where population ageing is seen as a presenting a major challenge to the way health and social care systems are currently designed, funded and managed. A major concern of many observers of this process is the likely impact that age-related cognitive impairments will have on those systems as population ageing progresses and if current epidemiological patterns of ageing persist. Currently there are no population-level studies of the dementias or Alzheimer's disease in Australia, an affluent country with a developed economy and significant investments in national and sub-national health information systems [4]. Yet it is already clear from Census and related analyses that the impact of population ageing in Australia is likely to vary significantly by time and location, with some states experiencing ageing sooner and at higher rates than others.

The second example, arising from our experiences with the first, is predicated on what can this application of giscience do for environments in which even national-level data sources are limited – if indeed any such resources even exist? And where health information systems themselves are also extremely finite as well as other issues confront treatment and care, such as a lack of health infrastructure and resources to address age-related issues directly. In this case, we chose Africa as a continental-level scenario where older people confront may health and social support issues and where societal and economic changes. The focus on infectious diseases along with poverty,

conflict and development issues has limited the attention given to population ageing in much of the health research conducted in African countries [5]. Yet even as Africa's estimated population rises to double its current level by the year 2050, growth in cohorts of older people will expand at equal or greater rates [6].

In this scenario, we took a population estimation model for the continent of Africa and applied estimates of dementia prevalence for the whole continent from Alzheimer's Disease International. The prevalence data was sub-divided for the continent by World Health Organisation region to take into account those areas most affected by factors such as HIV/Aids and life expectancy variations [7]. The application of the regionalised prevalence rates, by age cohort, to the population data have us an estimation of *likely* prevalence for the whole continent. This model was then driven down to the sub-national level to include the major administrative geography for each country (states/provinces). Finally, we graphed the resulting data in GE Grapher to produce a Keyhole Markup Language (KML) file that could be opened by anyone with access to Google Earth™.

2. Results

The results for the continent of Africa show how spatial methods can expand on existing knowledge and visualise the results at varying scales. In a situation where we currently have very little reliable scientific data and even censuses can be problematic, this provides us with an enhanced understanding of what patterns *may* be prevalent at the both the continental, national and sub-national level concurrently. The process of taking a consistent population data set, combining it with current epidemiological understanding and geographic methods builds our understanding of what may be occurring at different scales across Africa. Even if the results are subsequently shown to be wrong, especially as new and better data becomes available, the spatial scientific paradigm informs questions about what is happening where and what we might expect to see when better data is finally produced.

The results for Australia follow a similar pattern in that while available data for population as well as dementia prevalence and incidence are much better than for most African countries, the prevalence data for dementia and sub-types are still basically estimates because no population-level research studies exist. The added dimension of spatial visualisation contributes to our understanding of what potential impact population ageing and dementia are likely to be having on local communities including those in rural and remote regions where specialist service access and provision can vary considerably to those available in urban areas.

The logic of this approach includes providing the capacity for various types of health information (e.g. prevalence and/or incidence data for chronic conditions) to be accessed in a highly visual, multi-scalar environment. Like conventional maps, KML files permit the representation of data about multiple entities in spatial relation to each other. Added benefits are that (1) we can utilise the 'what-if' characteristics of modelling temporal prevalence data against existing healthcare facilities to explore the implications for the future and (2) better understand the dynamic relationships that may exist between data sets of varying quality (e.g. prevalence estimates versus incidence data).

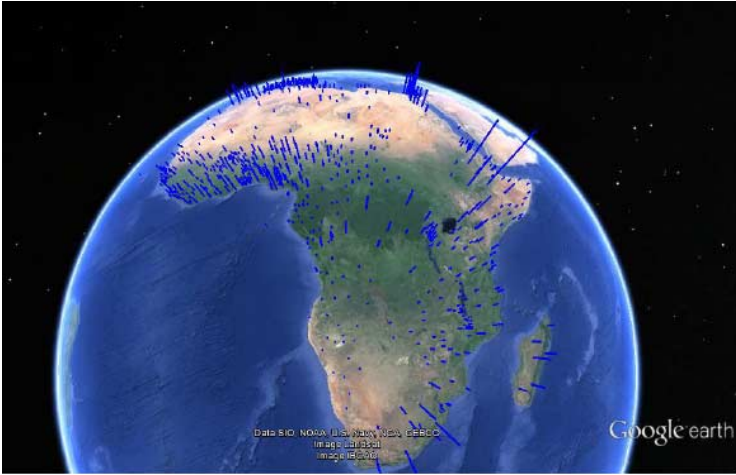

Figure 1. Alzheimer's Disease in Africa

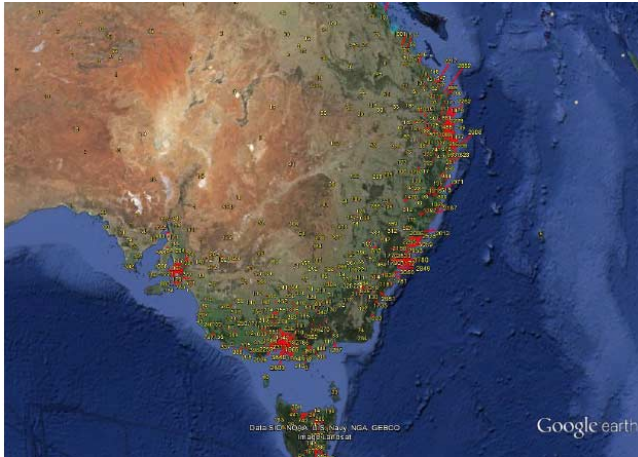

Figure 2. Dementia in Australia

3. Discussion

This paper illustrates two important aspects of the role of giscience for the wider, global health informatics environment. Firstly, we can take data known at one order of scale, such as the nation-state, and apply that to a larger scale (i.e. finer geographic detail) in order to explore and examine what we might expect to be happening at much more local levels – even when data is currently lacking, poorly collected or presently not integrated. Secondly, we can use known health information where data quantity and quality are high to help us model environments where data quantity and quality remain low. Thus, applying projected scenarios of disease expression or time-dependent incidence to explore what we would expect to see if our data systems were at the standard necessary for informed interventions, since a key aspect of the role of health

informatics is not only to track what is currently happening but to provide a supporting evidence base for various interventions in complex health environments.

We have briefly examined the potential contribution that giscience offers to the field of health informatics. More specifically our focus is on the advantages of adding giscience concepts, methods and technologies to a globalizing health information environment. Our position is that giscience has already been through many of the changes necessary to make the various spatial sciences able to actively engage with each other and to develop a future spatial environment in which local, national, cultural and semantic/linguistic issues are adequately incorporated into a genuinely global giscience environment. Health informatics is at the beginning this change process and has yet to become spatially integrated. The convergence of many information science approaches in an age of 'big data' offers an opportunity to address these outstanding issues. The outcome of this unfolding process will, we believe, lead to a genuinely *spatial* health informatics paradigm. Given the rising complexity of health systems globally and their multiple scales of interaction, it is our contention that health informatics needs to be spatial in order to meet these emerging challenges.

E-HEALTH – FOR CONTINUITY OF CARE

Studies in Health Technology and Informatics

This book series was started in 1990 to promote research conducted under the auspices of the EC programmes' Advanced Informatics in Medicine (AIM) and Biomedical and Health Research (BHR) bioengineering branch. A driving aspect of international health informatics is that telecommunication technology, rehabilitative technology, intelligent home technology and many other components are moving together and form one integrated world of information and communication media. The series has been accepted by MEDLINE/PubMed, SciVerse Scopus, EMCare, Book Citation Index – Science and Thomson Reuters' Conference Proceedings Citation Index.

MIE2014 Preface

On behalf of the European Federation for Medical Informatics and the Turkish Medical Informatics Association, we are proud and happy to invite you to the 25th European Medical Informatics Conference in Istanbul.

The 25th edition of our conference – this is an important anniversary!

Twenty-five is the age of youth, but also the beginning of maturity; it is a time of transition. What better place to celebrate this anniversary than in Istanbul, with its unique history and its fascinating mixture of past and present, of old and new, of religions and cultures.

Information technology and the information sciences have also reached the age of maturity. They are revolutionizing the healthcare system and deeply changing the whole health landscape, as well as health culture. Boundaries are becoming less clear. There is no less well-defined state than the ‘patient’ state. We are sometimes healthy and sometimes sick, but most of the time we are somewhere in between – not so healthy. We should all care about staying healthy. The boundary between health and ill-health is becoming harder to draw. A similar situation exists between prevention and care. While the healthcare system has always predominantly been involved in the management of disease and care, a new trend has appeared, with citizens increasingly involved in wellness and the prevention of ill-health. The quantified self provides the necessary tools to accompany this societal transformation.

The most recent impacts of the emerging field of biomedical informatics will be presented during the MIE 2014 conference. New phenotypical data sources, especially those arising from the ‘healthy world’, which is not usual for the medical sciences, are becoming an important pillar of health determinants, together with genetics, environment and lifestyle. New devices, new sources of data, new roles for all the actors involved are being invented. This point is well illustrated by several reports on Google Glass. The difference between Second Sight glasses, which were available as early as 2002, and Google Glass in 2014 is aesthetic, connectivity and information. The technology was already there, but only the added value derived from connectivity and information have made the glasses an attractive device. Environmental data, lifestyle, bio-captors, phenotypes extracted from EHRs, not to mention all the -omics, constitute the ‘holy grail’ of life science research: a data coverage of the major health determinants. Will we be able to transform the incredibly large amounts of data currently being made available into a clever and smart “Big data”. There are numerous challenges to be dealt with: technological challenges concerning the vast distributed volumes; semantic challenges concerning sources which are heterogeneous over time, of varying quality and reliability, and different contexts; ethical challenges when it comes to balancing public and individual benefits; and legal and societal challenges. All in all, the challenge of Big data questions the whole of society; its values, and its goals – not to mention the results. While this immature technology is promised a bright future, there are already enough reports stating that we need a more reliable methodology, especially when looking at preliminary work such as Google Flu Trends, which were demonstrated to be fast, inexpensive and *wrong* (Lazer et al., Science. 2014 Mar 14;343(6176):1203–5. doi: 10.1126/science.1248506).

Care process reengineering, the involvement of citizens and patients, continuity of care and health: these are only some of the numerous revolutions taking place. This dynamic is characterized by combined advances in technology and sciences, deep socio-cultural changes, and wide global adoption. And this is precisely the heart of the challenge.

We do not have the option to be spectators; we are actors. Thus, it is necessary to move forward while building an evidence base; making sure that knowledge can be shared and that experiences are reproducible. Amassing evidence and using standards are thus important aspects of our work. It is necessary to keep the ultimate goal of improved healthcare in mind, all the time directing projects and activities towards this goal. The building up of evidence has to be done while retaining some room for disruptive ideas, non-acceptable hypotheses and non-demonstrable theories. It is also our challenge to allow room to all those who think differently, for those who don't respect the evidence, for those transgressing truth; because truth is a contextual reality, only valid in a certain time and context.

Finally, because health determinants are local, because most health threats are local, and because the process of globalisation tends to lose sight of the personal, we must also be sure to balance truly global science with local experience. To quote Ilias Iakovidis: "Medicine is a global science, and a local art".

We would also like to acknowledge all our colleagues who devoted their time to the careful review of submissions. They have made it possible for the SPC to select the best papers and posters for inclusion in the proceedings. All submissions are Medline indexed and made available as open access through IOS Press homepage.

Multi-Provider Architecture for Cloud Outsourcing of Medical Imaging Repositories	146
<i>Tiago Marques Godinho, Luís António Bastião Silva, Carlos Costa and José Luis Oliveira</i>	
Semantic Krippendorff's α for Measuring Inter-Rater Agreement in SNOMED CT Coding Studies	151
<i>Daniel Karlsson, Kirstine Rosenbeck Gøeg, Håkan Öрман and Anne Randorff Højen</i>	
Preservation of Information in Terminology Transcoding	156
<i>Nicolas Griffon, Tayeb Merabti, Sylvie Cormont, Sophie Tariel-Laurent, Philippe Massari, Eric Lepage, Amina Chniti, Christel Daniel and Stéfan J. Darmoni</i>	
CIPROS – A Checklist with Items for a Patient Registry Software System	161
<i>Doris Lindoerfer and Ulrich Mansmann</i>	
Towards a Semantic PACS: Using Semantic Web Technology to Represent Imaging Data	166
<i>Johan van Soest, Tim Lustberg, Detlef Grittner, M. Scott Marshall, Lucas Persoon, Bas Nijsten, Peter Feltens and Andre Dekker</i>	
EHR-Based Disease Registries to Support Integrated Care in a Health Neighbourhood: An Ontology-Based Methodology	171
<i>Siaw-Teng Liaw, Jane Taggart and Hairong Yu</i>	
Web-Based Training: Readiness and Perceptions of Nurses	176
<i>Esra Uslu, Kadriye Buldukoglu and Nese Zayim</i>	
Information Model for Learning Nursing Terminology	181
<i>Jan Pettersen Nyttun and Mariann Fossum</i>	
Identifying Gaps Between Current and Expected ICT Competencies of Nurses in Serbia	186
<i>Sanja Paunic and Ivana Stojkovic</i>	
The Expectations of Nurses About the Implementation of a Barcoded Medication Administration System: A Qualitative Study	191
<i>Vanina Taliercio, Bibiana Schachner, Damian Borbolla, Daniel Luna, Elsa Villalba and Fernan Quiros</i>	
How Are Electronic Medical Records Used by Nurse Practitioners?	196
<i>Elizabeth M. Borycki, Esther Sangster-Gormley, Rita Schreiber, Joanne Thompson, Janessa Griffith, April Feddema and Alex Kuo</i>	
General vs Health Specialized Search Engine: A Blind Comparative Evaluation of Top Search Results	201
<i>Nataly Pletneva, Rafael Ruiz De Castaneda, Frédéric Baroz and Celia Boyer</i>	
A Perspective of Adaptation in Healthcare	206
<i>Emna Mezghani, Marcos Da Silveira, Cédric Pruski, Ernesto Exposito and Khalil Drira</i>	
Telepulmonology and Telespirometry	211
<i>Leonie Thijssing, Job van der Heijden, Christian Melissant, Niels Chavannes, Leonard Witkamp and Monique Jaspers</i>	

A Computational Infrastructure for Evaluating Care-Coordination and Telehealth Services in Europe	216
<i>Pantelis Natsiavas, Dimitrios Filos, Christos Maramis, Ioanna Chouvarda, Helen Schonenberg, Steffen Pauws, Cristina Bescos, Christoph Westerteicher, Nicos Maglaveras and the ACT Consortium</i>	
Disturbing or Facilitating? – On the Usability of Swedish eHealth Systems 2013	221
<i>Isabella Scandurra, Maria Hägglund, Anne Persson and Rose-Mharie Åhlfeldt</i>	
SNOMED CT Adoption in Denmark – Why Is It so Hard?	226
<i>Anne Randorff Højen, Pia Britt Elberg and Stig Kjær Andersen</i>	
Multinational Surveys for Monitoring eHealth Policy Implementations – Usefulness and Pitfalls	231
<i>Heidi Gilstad, Arild Faxvaag, Hannele Hyppönen, Sabine Koch, Christian Nøhr and Kristian Skauli</i>	
Prospective Assessment of an Innovative Test for Prostate Cancer Screening Using the VITA Process Model Framework	236
<i>Marion Gantner-Bär, Florian Meier, Peter Kolominsky-Rabas, Anatoli Djanatliev, Armin Metzger, Wieland Voigt, Hans-Ulrich Prokosch and Martin Sedlmayr on behalf of the ProHTA project team</i>	
Security Challenges in Integration of a PHR-S into a Standards Based National EHR	241
<i>Alexander Mense, Franz Hoheiser-Pförtner and Stefan Saueremann</i>	
Towards National eHealth Implementation – A Comparative Study on WHO/ITU National eHealth Strategy Toolkit in Iran	246
<i>Hossein Riazi, Maryam Jafarpour and Ehsan Bitaraf</i>	
Localizing the HL7 Personal Health Monitoring Record for Danish Telemedicine	251
<i>Henrik B. Christensen</i>	
Interoperability Standards Enabling Cross-Border Patient Summary Exchange	256
<i>Catherine Chronaki, Ana Estelrich, Giorgio Cangioli, Marcello Melgara, Dipak Kalra, Zabrina Gonzaga, Larry Garber, Elaine Blechman, Jamie Ferguson and Stephen Kay</i>	
Towards a Global IT System for Personalized Medicine: The Medicine Safety Code Initiative	261
<i>Matthias Samwald, José Antonio Minarro-Giménez, Kathrin Blagec and Klaus-Peter Adlassnig</i>	
Using Design Science Research to Develop Online Enhanced Pharmaceutical Care Services	266
<i>Luís Velez Lapão, João Gregório, Diogo Mello, Afonso Cavaco, Miguel Mira Da Silva and Christian Lovis</i>	

3. Improved Healthcare Through Informatics

An Approach for Utilizing Clinical Statements in HL7 RIM to Evaluate Eligibility Criteria	273
<i>Richard Bache, Christel Daniel, Julie James, Sajjad Hussain, Mark McGilchrist, Brendan Delaney and Adel Taweel</i>	
A Conceptual Framework to Design a Dimensional Model Based on the HL7 Clinical Document Architecture	278
<i>Fabrizio Pecoraro, Daniela Luzi and Fabrizio L. Ricci</i>	

Formalizing Mappings to Optimize Automated Schema Alignment: Application to Rare Diseases	283
<i>Meriem Maaroufi, Rémy Choquet, Paul Landais and Marie-Christine Jaulent</i>	
Estimating the Impact of Prevention Action: A Simulation Model of Cervical Cancer Progression	288
<i>Michal Rosen-Zvi, Lavi Shpigelman, Alan Kalton, Omer Weissbrod, Saheed Akindeinde, Soren Benfeldt, Andrew Bentley, Terry Everett, Joseph Jajinskiji, Emmanuel Kweyu, Chalapathy Neti, Joe Saab, Osamuyimen Stewart, Malcolm Ward and Guo Tong Xie</i>	
A Concept of a MIABIS Based Register of Biosample Collections at the Medical University of Innsbruck	293
<i>Philipp Hofer, Heidi Fiegl, Justina Angerer, Elisabeth Mueller-Holzner, Martina Schamson, Helmut Klocker, Eberhardt Steiner, Helga Hauflfe, Johanna Zschocke and Georg Goebel</i>	
How Google Glass Could Support Patients with Diabetes Mellitus in Daily Life	298
<i>Christian Hetterich, Monika Pobiruchin, Martin Wiesner and Daniel Pfeifer</i>	
Shared Decision Making: Using Theories and Technology to Engage the Patient in Their Health Journey	303
<i>Amina Russell, Samina Raza Abidi and Syed Sibte Raza Abidi</i>	
Knowledge Representations in Ambient Assisted Living – Context Awareness in Smart Homes	308
<i>Franz-Albert Zilm, Corinna Scharnweber and Reinhold Haux</i>	
Rule-Based Interface Generation on Mobile Devices for Structured Documentation	313
<i>Ann-Kristin Kock, Björn Andersen, Heinz Handels and Josef Ingenerf</i>	
Learning from an Ambient Assisted Living Lab: The Case of the Intelligent Bed	318
<i>Ann Bygholm and Anne Marie Kanstrup</i>	
Improving Health Care Service Delivery with a National Code Service	323
<i>Riikka Vuokko, Päivi Mäkelä-Bengs and Mikko Härkönen</i>	
Mining Level of Control in Medical Organizations	328
<i>Olgu Çalimli, Serkan Türkelı, Emir Gökberk Eken and Halil Emre Gönen</i>	
Using an Iconic Language to Improve Access to Electronic Medical Records in General Medicine	333
<i>Christian Simon, Sylvain Hassler, Marie-Catherine Beuscart-Zephir, Madeleine Favre, Alain Venot, Catherine Duclos and Jean-Baptiste Lamy</i>	
A Workflow Model to Analyse Pediatric Emergency Overcrowding	338
<i>Hayfa Zgaya, Ines Ajmi, Lotfi Gammoudi, Slim Hammadi, Alain Martinot, Régis Beuscart and Jean-Marie Renard</i>	
The Data Model for Social Welfare in Finland	343
<i>Jarmo Kärki and Erja Ailio</i>	
Integrating Personalized Health Information from MedlinePlus in a Patient Portal	348
<i>Damian Borbolla, Guilherme Del Fiol, Vanina Taliercio, Carlos Otero, Fernando Campos, Marcela Martinez, Daniel Luna and Fernan Quiros</i>	
Telehealth for “the Digital Illiterate” – Elderly Heart Failure Patients’ Experiences	353
<i>Leili Lind and Daniel Karlsson</i>	
An Open-Source, Mobile-Friendly Search Engine for Public Medical Knowledge	358
<i>Matthias Samwald and Allan Hanbury</i>	

A Mobile Logbook to Diagnose Masked Hypertension: A Pilot Application <i>Claudio Eccher, Maria Botteri, Daniele Ortolani, Stefano Forti and Enrico Maria Piras</i>	363
A Reference Data Model of a Metadata Registry Preserving Semantics and Representations of Data Elements <i>Martin Löpprich, Jennifer Jones, Marie-Claire Meinecke, Hartmut Goldschmidt and Petra Knaup</i>	368
Longitudinal Data Driven Study Design <i>Hauke Hund, Sven Gerth, Dirk Lossnitzer and Christian Fegeler</i>	373
End Users Transforming Experiences into Formal Information and Process Models for Personalised Health Interventions <i>Helena Lindgren, Lillemor Lundin-Olsson, Petra Pohl and Marlene Sandlund</i>	378
Towards IHE Profiles for e-Supply in the Healthcare Domain <i>Gerd Schneider, Georg Heidenreich, Lasse van de Sand, Jose Teixeira, Alfons Rathmer, Briitta Böckmann, Hubert Otten, Björn Bergh and Sylvia Thun</i>	383
Separation of Personal Data in a Biobank Information System <i>Thomas H. Müller and Reinhard Thasler</i>	388
Providing Multilingual Access to Health-Related Content <i>Till Plumbaum, Sascha Narr, Elif Eryilmaz, Frank Hopfgartner, Funda Klein-Ellinghaus, Anna Reese and Sahin Albayrak</i>	393
Personalized Fall Risk Assessment Tool by Using the Data Treasure Contained in Mobile Electronic Patient Records <i>Elif Eryilmaz, Sebastian Ahrndt, Johannes Fähndrich and Sahin Albayrak</i>	398
Pediatrics Prescriptions with Ontologies and Treatment Suggestions <i>Oana-Sorina Lupșe and Lăcrămioara Stoicu-Tivadar</i>	403
G-Quest: A Single Platform for Delivering Questionnaires, Educational Material, and Checklists on Mobile Devices <i>Giordano Lanzola, Germana Ginardi, Paola Russo and Silvana Quaglino</i>	408
A Model for Consent-Based Privilege Management in Personal Electronic Health Records <i>Oliver Heinze and Björn Bergh</i>	413
HTML5 Microdata as a Semantic Container for Medical Information Exchange <i>Eizen Kimura, Shinji Kobayashi and Ken Ishihara</i>	418
Adaptive Healthcare Processes for Personalized Emergency Clinical Pathways <i>M. Poullymenopoulou, D. Papakonstantinou, F. Malamateniou and G. Vassilacopoulos</i>	423
A Novel EEG-Based Spelling System Using N100 and P300 <i>Hikaru Sato and Yoshikazu Washizawa</i>	428
Supporting Talk-Based Mental Health Interventions with Digital Whiteboards <i>Anja Perlich, Julia von Thienen and Christoph Meinel</i>	433
ImmunoDB: A Web Based Tool to Analyze Preclinical Data <i>Rosa Lavieri, Gilberto Filaci, Daniela Fenoglio and Mauro Giacomini</i>	438
Analysis of the Patients and Physicians Connection Network on an Online Health Information Platform <i>Mehmet N. Aydin and N. Ziya Perdahci</i>	443

Increasing Information Accessibility for Patients in Obstetrics-Gynecology Domain	448
<i>Mihaela Crişan-Vida and Lăcrămioara Stoicu-Tivadar</i>	
Progressive Testing of Health Self-Efficacy and Literacy for Personalized Engagement	453
<i>Pei-Yun Sabrina Hsueh, XinXin Zhu and Sreeram Ramakrishnan</i>	
The Evolution of Personal Health Records and their Role for Self-Management: A Literature Review	458
<i>Monika A. Johansen and Eva Henriksen</i>	
Policy-Driven Management of Personal Health Information for Enhancing Interoperability	463
<i>Bernd Blobel, Pekka Ruotsalainen, Carolina González and Diego López</i>	
4. Intelligent Data Analysis	
Development of Temporal Context-Based Feature Abstractions for Enabling Monitoring and Managing of Interventions	471
<i>Pei-Yun Sabrina Hsueh, Sreeram Ramakrishnan, Ke Yu, Marina Akushevich, Shweta Sharma and Peter Mooiweer</i>	
Alignment of High-Throughput Sequencing Data Inside In-Memory Databases	476
<i>Daniel Firnkorn, Petra Knaup-Gregori, Justo Lorenzo Bermejo and Matthias Ganzinger</i>	
A Hybrid Particle Swarm and Neural Network Approach for Detection of Prostate Cancer from Benign Hyperplasia of Prostate	481
<i>Farhnaz Sadoughi and Mustafa Ghaderzadeh</i>	
Comparison of Enhancement Methods for Mammograms with Performance Measures	486
<i>Burçin Kurt, Vasif V. Nabiyevev and Kemal Turhan</i>	
Animal Testing Using 3D Microwave Tomography System for Breast Cancer Detection	491
<i>Jong Moon Lee, Sung Ho Son, Hyuk Je Kim, Bo Ra Kim, Heyng Do Choi and Soon Ik Jeon</i>	
ICT Health 2013: Infrastructure and Adoption by Healthcare Providers in Brazil	496
<i>Heimar F. Marin, Fabio Senne and Alexandre Barbosa</i>	
A Novel SVM-ID3 Hybrid Feature Selection Method to Build a Disease Model for Melanoma Using Integrated Genotyping and Phenotype Data from dbGaP	501
<i>Yeşim Aydın Son and Sait Can Yücebaş</i>	
Effects of Pathological Respiratory Pattern on Heart Rate Turbulence in Sleep Apnea	506
<i>Giovanni D'Addio, Alberto De Felice, Giuseppe Insalaco, Maria Romano and Mario Cesarelli</i>	
Predicting the Disease of Alzheimer With SNP Biomarkers and Clinical Data Using Data Mining Classification Approach: Decision Tree	511
<i>Onur Erdoğan and Yeşim Aydın Son</i>	
Correlation Between Symbolic Dynamics Analysis Indexes and Neurohormonal and Functional Parameters in Heart Failure Patients	516
<i>Mario Cesarelli, Maria Romano, Roberto Maestri, Maria Teresa La Rovere, Paolo Bifulco and Giovanni D'Addio</i>	

5. Mobile Health

Mobility Parameters in Health Applications – A Literature Review <i>Nina Loechte, Tobias von Bargen and Reinhold Haux</i>	523
A Usability Study of a Mobile Monitoring System for Congestive Heart Failure Patients <i>I. Svagård, H.O. Austad, T. Seeberg, J. Vedum, A. Liverud, B.M. Mathiesen, O.C. Bendixen, B. Keller, P. Osborne and F. Strisland</i>	528
Developing an mHealth Framework to Improve Diabetes Self-Management <i>Saif Khairat and Carolyn Garcia</i>	533
Integration of Federated Medical Systems for Vendor Neutral Image Access in Teleradiology Applications <i>Ayhan Ozan Yilmaz and Nazife Baykal</i>	538
Analysis of Social Networks Among Physicians Employed at a Medical School <i>Yilmaz Kemal Yuce, Nese Zayim, Basak Oguz, Selen Bozkurt, Filiz Isleyen and K. Hakan Gulkesen</i>	543
GlassAllergy: A Google Glass-Based Solution to Empower Patients with Skin Allergies <i>Martin Wiesner, Monika Pobiruchin, Christian Hetterich and Daniel Pfeifer</i>	548
Examination of Centrality in a Health Social Network <i>Semiha N. Alaşan, Kamran E. Sayin and Mehmet N. Aydin</i>	553
Activity Trackers: A Critical Review <i>Jeon Lee and Joseph Finkelstein</i>	558

6. Natural Language Processing

Sublanguage Analysis of Medical Weblogs <i>Kerstin Denecke</i>	565
Computer Based Extraction of Phenotypic Features of Human Congenital Anomalies from the Digital Literature with Natural Language Processing Techniques <i>Gökhan Karakülah, Oğuz Dicle, Özgün Koşaner, Aslı Suner, Çağdaş Can Birant, Tolga Berber and Sezin Canbek</i>	570
Exploiting Parallel Corpora to Scale Up Multilingual Biomedical Terminologies <i>Johannes Hellrich and Udo Hahn</i>	575
Link Prediction in a MeSH Co-occurrence Network: Preliminary Results <i>Andrej Kastrin, Thomas C. Rindfleisch and Dimitar Hristovski</i>	579
Exploring the Application of Deep Learning Techniques on Medical Text Corpora <i>José Antonio Minarro-Giménez, Oscar Marín-Alonso and Matthias Samwald</i>	584
Improving EHR Semantic Interoperability: Future Vision and Challenges <i>Catalina Martínez-Costa, Dipak Kalra and Stefan Schulz</i>	589
A Framework for Evaluating and Utilizing Medical Terminology Mappings <i>Sajjad Hussain, Hong Sun, Anil Sinaci, Gökce Banu Laleci Erturkmen, Charles Mead, Alasdair J.G. Gray, Deborah L. McGuinness, Eric Prud'Hommeaux, Christel Daniel and Kerstin Forsberg</i>	594

Beyond Copy and Paste: Clinician Approaches to Meeting Information Needs During Note Writing	599
<i>Yalini Senathirajah, David Kaufman and Suzanne Bakken</i>	
Real-Time Monitoring of Clinical Processes Using Complex Event Processing and Transition Systems	604
<i>Sebastian Meinecke</i>	
Comparing Narrative Versus Numerical Display of Functional Information: Impact on Sense-Making	609
<i>Charlene Weir, Robert Dunlea, Nancy Staggers, Kristina Dooing-Harris, Teresa McCormick and Robyn Barrus</i>	
7. Patient-Centred Care	
Improving Integrated Care in Chronic Kidney Failure Patients with a Standard-Based Interoperability Framework	617
<i>Francisco Núñez-Benjumea, Alberto Moreno-Conde, Francisco Jódar-Sánchez, Alicia Martínez-García and Carlos L. Parra-Calderón</i>	
Screening Radiation Exposure for Quality Assurance	622
<i>Luis A. Bastião Silva, Luis S. Ribeiro, Milton Santos, Carlos Costa and Jose Luis Oliveira</i>	
TeamTreat – A Communication Platform for Concerted Cancer Treatment	627
<i>Stefan Lenz, Torsten Panholzer, Philipp Emmerich and Frank Ückert</i>	
Development of a Medical Module for Disaster Information Systems	632
<i>Elif Çalik, Rıdvan Atilla, Hilal Kaya, Alirıza Aribaş, Hakan Cengiz and Oğuz Dicle</i>	
Structuring Medication Related Activities for Information Management	637
<i>Irmeli Luukkonen, Juha Mykkänen, Eija Kivekäs and Kaija Saranto</i>	
Medication Information Management: Capturing Multiprofessional Perspective	642
<i>Irmeli Luukkonen, Juha Mykkänen, Eija Kivekäs and Kaija Saranto</i>	
Fall-Related Information Seeking Behavior of Seniors on the Web	647
<i>Marjan Askari, Saeid Eslami, Stephanie Medlock, Sophia E. de Rooij and Ameen Abu-Hanna</i>	
Managing Complex Therapies Outside Hospitals. An Analysis of GPs Practices of How to Support Medication at Home	652
<i>Enrico Maria Piras, Francesco Miele, Attila Bruni, Claudio Coletta and Alberto Zanutto</i>	
User Needs and Requirements Analysis for Big Data Healthcare Applications	657
<i>Sonja Zillner, Nelia Lasierra, Werner Faix and Sabrina Neururer</i>	
Evaluation of the Usability of a Serious Game Aiming to Teach Facial Expressions to Schizophrenic Patients	662
<i>Filiz Isleyen, K. Hakan Gulkesen, Buket Cinemre, M. Kemal Samur, Nese Zayim and Semiha Sen Kaya</i>	
Supporting Elderly Homecare with Smartwatches: Advantages and Drawbacks	667
<i>Frederic Ehrler and Christian Lovis</i>	
Development of Structured Clinical Process Model of Dementia	672
<i>Satoko Tsuru, Maiko Mizuki, Fumiko Wako, Miho Omori and Takeo Nakayama</i>	

Vision and Challenges of a Cartographic Representation of Expert Medical Centres for Rare Diseases	677
<i>Holger Storf, Tobias Hartz, Niels Tegtbauer, Wulf Pfeiffer, Joerg Schmidtke, Holm Graessner, Thomas Wagner and Frank Ückert</i>	
Contrastive Conversational Analysis of Language Production by Alzheimer's and Control People	682
<i>Maité Boyé, Natalia Grabar and Mai Thi Tran</i>	
Assistive System for People with Apraxia Using a Markov Decision Process	687
<i>Emilie M.D. Jean-Baptiste, Martin Russell and Pia Rothstein</i>	
Enabling Person-Centric Care Using Linked Data Technologies	692
<i>Spyros Kotoulas, Walter Sedlazeck, Vanessa Lopez, Marco Sbodio, Martin Stephenson, Pierpaolo Tommasi and Pol Mac Aonghusa</i>	
Nutritional Alert in Hospitalized Patients	697
<i>Humberto Fernán Mandirola Brioux, Diego Kaminker, Fernando Campos, Sebastian Guillen, Javier Alejandris, Daniel Luna, Analia Baum and Fernán Gonzalez Bernaldo de Quirós</i>	
Online Information Seeking for Cardiovascular Diseases: A Case Study from Mayo Clinic	702
<i>Ashutosh Jadhav, Stephen Wu, Amit Sheth, Jyotishman Pathak</i>	
Virtual Patients in a Real Clinical Context Using Augmented Reality: Impact on Antibiotics Prescription Behaviors	707
<i>Sokratis Nifakos and Nabil Zary</i>	
8. Quality and Privacy	
Automatic Variance Analysis of Multistage Care Pathways	715
<i>Xiang Li, Haifeng Liu, Shilei Zhang, Jing Mei, Guotong Xie, Yiqin Yu, Jing Li and Geetika T. Lakshmanan</i>	
Abbreviations in Swedish Clinical Text – Use by Three Professions	720
<i>Elin Lövestam, Sumithra Velupillai and Maria Kvist</i>	
Machine Learning-Based Detection of Chemical Risk	725
<i>Natalia Grabar, Ornella Wandji Tchami and Laura Maxim</i>	
Blood Bag Temperature Monitoring System	730
<i>Shokoufeh Aalaei, Shahram Amini, Mohammad Reza Keramati, Hadi Shahraki, Ameen Abu-Hanna and Saeid Eslami</i>	
Computational Study of the Potential Role of Chemotaxis in Enhancing the Cell Seeding of Tissue Engineering Scaffolds	735
<i>Andreea Robu, Lacramioara Stoicu-Tivadar, Nicolae Robu and Adrian Neagu</i>	
A Framework for Privacy-Preserving Access to Next-Generation EHRs	740
<i>Vassiliki Koufi, Flora Malamateniou, Aggeliki Tsohou and George Vassilacopoulos</i>	
Secure Teleassistance Towards Endless Medical Litigations: Identification of Liabilities Through a Protocol Using Joint Watermarking-Encryption Evidences	745
<i>D. Bouslimi, G. Coatrieux, C. Quantin, F.A. Allaërt, M. Cozic and Ch. Roux</i>	

Balancing the Need for Big Data and Patient Data Privacy – An IT Infrastructure for a Decentralized Emergency Care Research Database	750
<i>Janko Ahlbrandt, Dominik Brammen, Raphael W. Majeed, Rolf Lefering, Sebastian C. Semler, Sylvia Thun, Felix Walcher and Rainer Röhrig</i>	
Patient Information, Consents and Privacy Protection Scheme for an Information System Dedicated to Pervasive Developmental Disorders	755
<i>Mohamed Ben Said, Laurence Robel, Claude Messiaen, Yann Craus, Jean Philippe Jais, Bernard Golse and Paul Landais</i>	
9. Research and Education	
Clustering Physical Activity Phenotypes Using the ATLAS Index on Accelerometric Data from an Epidemiologic Cohort Study	763
<i>Michael Marschollek</i>	
Towards a Trial-Ready Mobile Patient Questionnaire System	768
<i>Michael Storck, Benjamin Trinczek, Martin Dugas and Fleur Fritz</i>	
Health Information Research Platform (HIReP) – An Architecture Pattern	773
<i>Björn Schreiweis, Gerd Schneider, Theresia Eichner, Björn Bergh and Oliver Heinze</i>	
Can Physicians Recognize Their Own Patients in De-Identified Notes?	778
<i>Stéphane Meystre, Shuying Shen, Deborah Hofmann and Adi Gundlapalli</i>	
The Use of DRG for Identifying Clinical Trials Centers with High Recruitment Potential: A Feasibility Study	783
<i>Philippe Aegerter, Noelle Bendersky, Thi-Chien Tran, Jacques Ropers, Namik Taright and Gilles Chatellier</i>	
Virtual Patient Repositories – A Comparative Analysis	788
<i>Julia Küfner, Andrzej A. Kononowicz and Inga Hege</i>	
Virtual Patients in Massive Open Online Courses – Design Implications and Integration Strategies	793
<i>Natalia Stathakarou, Nabil Zary, Andrzej A. Kononowicz</i>	
New Bachelors Degree Program in Health Informatics in Ethiopia: Curriculum Content and Development Approaches	798
<i>Binyam Tilahun, Atinkut Zeleke, Fleur Fritz and Desalegn Zegeye</i>	
eduCRATE – A Virtual Hospital Architecture	803
<i>Lăcrimioara Stoicu-Tivadar, Vasile Stoicu-Tivadar, Dorin Berian, Simona Drăgan, Alexandru Șerban and Corina Șerban</i>	
Matching Study to Registry Data: Maintaining Data Privacy in a Study on Family Based Colorectal Cancer	808
<i>Daniel Nasseh, Jutta Engel, Ulrich Mansmann, Werner Tretter and Jürgen Stausberg</i>	
The Everyday Ethics of Field Work Research with Vulnerable Patients	813
<i>Valentina Lichtner</i>	
Determinants of Eligibility and Use of eHealth for Cardiac Rehabilitation Patients: Preliminary Results	818
<i>Anne-Marieke Wiggers, Niels Peek, Roderik Kraaijenhagen and Monique Jaspers</i>	

Supporting Patient Screening to Identify Suitable Clinical Trials <i>Anca Bucur, Jasper van Leeuwen, Njin-Zu Chen, Brecht Claerhout, Kristof de Schepper, David Perez-Rey, Raul Alonso-Calvo, Lina Pugliano and Kamal Saini</i>	823
Teaching Bioinformatics to Engineers <i>George I. Mihalas, Anca Tudor, Sorin Paralescu, Minodora Andor and Lacramioara Stoicu-Tivadar</i>	828
Requirements for Prototyping an Educational Electronic Health Record: Experiences and Future Directions <i>Andre Kushniruk, Elizabeth Borycki, Mu-Hsing Kuo, Eric Parapini, Shu Lin Wang and Kendall Ho</i>	833
Do Electronic Health Records Help Undergraduate Students Develop Health Informatics Competencies? <i>Elizabeth M. Borycki, Janessa Griffith, Paulette Reid, Mu-Hsing Kuo and Andre W. Kushniruk</i>	838
e-Literacy in Health Care <i>Ela Klecun, Valentina Lichtner and Tony Cornford</i>	843
Concept for Linking De-Identified Biomedical Research Data Using a Study Participant Management System <i>Alexander Stahmann, Christian R.K.D. Bauer, Jens Schwanke</i>	848
Analysis of Eligibility Criteria from ClinicalTrials.gov <i>Justin Doods, Martin Dugas and Fleur Fritz</i>	853
Towards an Automatic Harmonization of the Representation of Medical Reports to Assess Their Similarities <i>Yves Parès, Xavier Aimé, Jean Charlet and Marie-Christine Jaulent</i>	858
Crucial Issues in Think Aloud Techniques for Cross Cultural Studies <i>Seneca Perri, Amani Shao, Ndeniria Swai, Marc Mitchell and Nancy Staggers</i>	863
Interconnection of Electronic Medical Record with Clinical Data Management System by CDISC ODM <i>Yasushi Matsumura, Atsushi Hattori, Shiro Manabe, Toshihiro Takeda, Daiyo Takahashi, Yuichiro Yamamoto, Taizo Murata and Naoki Mihara</i>	868
 10. Technology and System Evaluation	
Barriers to Implementing eHealth: A Multi-Dimensional Perspective <i>Bidah Alkhalidi, Tony Sahama, Craig Huxley and Randike Gajanayake</i>	875
Perceived Usefulness of a Usability Issues Reporting Form to Help Understand “Usability-Induced Use-Errors”: A Preliminary Study <i>Romarc Marcilly, Cesar Boog, Nicolas Leroy and Sylvia Pelayo</i>	880
Methods Uncovering Usability Issues in Medication-Related Alerting Functions: Results from a Systematic Review <i>Romarc Marcilly, Francis Vasseur, Elske Ammenwerth and Marie-Catherine Beuscart-Zephir</i>	885
Designing and Conducting Low-Cost In-Situ Clinical Simulations: A Methodological Approach <i>Andre W. Kushniruk and Elizabeth M. Borycki</i>	890
Web-Site Evaluation Tools: A Case Study in Reproductive Health Information <i>Azam Aslani, Omid Pournik, Ameen Abu-Hanna and Saeid Eslami</i>	895

User Satisfaction and Experience with a Telehealth System for the Danish TeleCare North Trial: A Think-Aloud Study	900
<i>Pernille Heyckendorff Lilholt, Sisse Heiden and Ole K. Hejlesen</i>	
Context Mediated Usability Testing	905
<i>Craig Kuziemsky and Andre Kushniruk</i>	
Participatory Heuristic Evaluation of a Tablet Computer System for Clinical Microbiology	910
<i>Lasse Lefevre Samson, Louise Pape-Haugaard, Mette Sogaard, Henrik Carl Schonheyder and Ole K. Hejlesen</i>	
eHealth-as-a-Service (eHaaS): A Data-Driven Decision Making Approach in Australian Context	915
<i>Alofi Black, Tony Sahama and Randike Gajanayake</i>	
Heuristic Evaluation and Thinking Aloud Test of a Digitized Questionnaire for Diabetes Outpatient Clinics	920
<i>Clara Schaarup and Ole Hejlesen</i>	
Evaluation of a Clinical Simulation-Based Assessment Method for EHR-Platforms	925
<i>Sanne Jensen, Stine Loft Rasmussen and Karen Marie Lyng</i>	
Revisiting Heuristic Evaluation Methods to Improve the Reliability of Findings	930
<i>Mattias Georgsson, Charlene R. Weir and Nancy Stagers</i>	
Quality of Life of Patients with Spinal Cord Injury in Italy: Preliminary Evaluation	935
<i>Carla Rognoni, Gabriella Fizzotti, Caterina Pistarini and Silvana Quaglini</i>	
Observations and Lessons Learnt from Non Health Professionals Evaluating a Health Search Engine	940
<i>Natalia Pletneva, Zdenka Uresova, Jean-Jacques Altman, Nicolas Postel-Vinay, Patrice Degoulet, Jan Hajic and Celia Boyer</i>	
eHCM: Resources Reduction & Demand Increase, Cover the Gap by a Managerial Approach Powered by an IT Solutions	945
<i>Matteo Buccioli, Vanni Agnoletti, Emanuele Padovani and Peter Perger</i>	
A Semi-Automatic Web Based Tool for the Selection of Research Projects Reviewers	950
<i>Valeria Pupella, Maria Eugenia Monteverde, Claudio Lombardo, Filippo Belardelli and Mauro Giacomini</i>	
Monitoring Health IT Integration – The Effect of an EMR on Laboratory Service Timeliness Across Six Australian Hospitals	955
<i>Andrew Georgiou, Elia Vecellio, Ling Li, Alex Eigenstetter, Roger Wilson, George Toouli and Johanna I. Westbrook</i>	
Evaluation of System Quality of Hospital Information System: A Case Study on Nurses' Experiences	960
<i>Abbas Sheikhtaheri, Khalil Kimiafar and Masoumeh Sarbaz</i>	
EHR and Usability of Health Data to Benefit Patient and Public Health	965
<i>Raffaella Brighi and Maria Gabriella Virone</i>	
PAT: An Intelligent Authoring Tool for Facilitating Clinical Trial Design	970
<i>Anastassios Tagaris, Vassiliki Andronikou, Efstathios Karanastasis, Efthymios Chondrogiannis, Charalambos Tsirmpas, Theodora Varvarigou and Dimitris Koutsouris</i>	

Enhancing Informatics Competency Under Uncertainty at the Point of Decision: A Knowing About Knowing Vision	975
<i>Mette Kjer Kaltoft, Jesper Bo Nielsen, Glenn Salkeld and Jack Dowie</i>	
Consumer Acceptance of Accountable-eHealth Systems	980
<i>Randike Gajanayake, Renato Iannella and Tony Sahama</i>	
Protocol Feasibility Workflow Using an Automated Multi-Country Patient Cohort System	985
<i>Iñaki Soto-Rey, Benjamin Trinczek, Töresin Karakoyun, Martin Dugas and Fleur Fritz</i>	
Determinants of Continuance Intention in a Post-Adoption Satisfaction Evaluation of a Clinical Information System	990
<i>Brahim Hadji, Isabelle Dupuis, Laurence Leneveut, Didier Heudes, Jean-François Wagner and Patrice Degoulet</i>	
Electronic Processing of Informed Consents in a Global Pharmaceutical Company Environment	995
<i>Dina Vishnyakova, Julien Gobeill, Fatma Oezdemir-Zaech, Olivier Kreim, Therese Vachon, Thierry Clade, Xavier Haenning, Dmitri Mikhailov and Patrick Ruch</i>	

11. Technology and System Evaluation

The Influence of Similarity Between Concepts in Evolving Biomedical Ontologies for Mapping Adaptation	1003
<i>Julio Cesar Dos Reis, Duy Dinh, Cédric Pruski, Marcos Da Silveira and Chantal Reynaud-Delaître</i>	
An Approach to Compare Bio-Ontologies Portals	1008
<i>Julien Grosjean, Lina F. Soualmia, Khedidja Bouarech, Clément Jonquet and Stéfan J. Darmoni</i>	
Automatic Annotation of ICD-to-MedDRA Mappings with SKOS Predicates	1013
<i>Gunnar Declerck, Julien Souvignet, Jean-Marie Rodrigues and Marie-Christine Jaulent</i>	
Ontology Patterns-Based Transformation of Clinical Information	1018
<i>María del Carmen Legaz-García, Catalina Martínez-Costa, Jose Antonio Miñarro-Giménez, Jesualdo Tomás Fernández-Breis, Stefan Schulz and Marcos Menárguez-Tortosa</i>	
Describing Localized Diseases in Medical Ontology: An FMA-Based Algorithm	1023
<i>Jean Charlet, Laurent Mazuel, Gunnar Declerck, Patrick Miroux and Pierre Gayet</i>	
Implementing Reusable Software Components for SNOMED CT Diagram and Expression Concept Representations	1028
<i>Balázs Bánfai, Roland Porció and Tibor Kovács</i>	
Effective Ways for the Transmission of Infection Prevention Data According to German Legal Specifications via the Medical Terminology SNOMED CT Used with HL7 CDA Templates	1033
<i>Heike Dewenter, Kai U. Heitmann, Lars Treinat and Sylvia Thun</i>	

What's in a Class? Lessons Learnt from the ICD – SNOMED CT Harmonisation	1038
