c Faculty of Medicine, University of NSW

Abstract. Health systems globally are undergoing significant changes. New systems are emerging in developing countries where there were previously limited healthcare options, existing systems in emerging and developed economies are under significant resource pressures and population dynamics are creating significant pressures for change. As health systems expand and intensify, information quality and timeliness will be central to their sustainability and continuity. Information collection and transfer across diverse systems and international borders already presents a significant challenge for health system operations and logistics. Geographic information science (gisscience) has the potential to support and enhance health informatics in the coming decades as health information transfers become increasingly important. In this article we propose a spatially enabled approach to support and increasingly globalised health informatics environment. In a world where populations are ageing and urbanising and health systems are linked to economic and social policy shifts, knowing where patients, diseases, health care workers and facilities are located becomes central to those systems operational capacities. In this globalising environment, health informatics needs to be spatially enabled informatics.

Keywords. Global, ageing, modelling, giscience, spatial, visualisation

Introduction

The developing economies of Asia, South America and, to a lesser extent, Africa are all seeing significant changes to their established health care systems. These changes include the emergence of rapidly expanding public and private healthcare systems, medical insurance schemes, long term care systems and a massive expansion in aged care as well as skilled migration internally and internationally. Population ageing is driving major changes in the healthcare systems of the developed world and in many emerging economies because it is increasingly a global demographic trend [1]. This means that health information systems are in a phase of expansion, diversification and interconnection [2]. The globalisation of health information systems has important implications for the quality, safety and effectiveness of health services in this dynamic and rapidly changing environment.

1 Corresponding Author: e-mail: h.robertson@neura.edu.au.
In this paper we briefly explore how the integration of spatial concepts, methods and technologies has the capacity to enhance and support a globalising health informatics paradigm. The broad interdisciplinary field of the spatial sciences is highly information focused. A major issue for those sciences over the past few decades has been the issue of revising and integrating their information paradigms as the context of their theories and practices became increasingly interconnected and internationalised. This form of globalisation has had a significant impact on the way in which important information management concepts and practices have developed. Firstly, data collection is increasingly collected with geospatial indexing attached (georeferencing) which contextualises that data at both a local (collection site) and a global level (e.g. latitude, longitude and altitude). Secondly, significant metadata issues have undergone a process of inquiry, revision and restructuring in order to ensure that data interchange practices facilitate this local to global transformation and to support the complex research issues we are dealing with at a local-global level (e.g. climate change phenomena). Thirdly, the type and variety of user interfaces has expanded enormously and in ways that increasingly permit non-expert use and application of georeferenced data (e.g. Google Maps and Google Earth). Lastly, this drive towards a broadly accessible spatial informatics paradigm is producing its own innovation drivers that increasingly seek to connect those older data paradigms with these new theories and methods [3].

1. Methods

The scenarios presented here are case studies developed by the authors as part of their research programmes in the fields of spatial science and health informatics. They only illustrate the potential of the premise we are exploring – that is, the integration of a giscience perspective to a globalising health informatics environment. As such they are developmental studies and not the endpoints of a defined or funded research programme.

In the first instance we applied this kind of approach to Australia where population ageing is seen as a presenting a major challenge to the way health and social care systems are currently designed, funded and managed. A major concern of many observers of this process is the likely impact that age-related cognitive impairments will have on those systems as population ageing progresses and if current epidemiological patterns of ageing persist. Currently there are no population-level studies of the dementias or Alzheimer’s disease in Australia, an affluent country with a developed economy and significant investments in national and sub-national health information systems [4]. Yet it is already clear from Census and related analyses that the impact of population ageing in Australia is likely to vary significantly by time and location, with some states experiencing ageing sooner and at higher rates than others.

The second example, arising from our experiences with the first, is predicated on what can this application of giscience do for environments in which even national-level data sources are limited – if indeed any such resources even exist? And where health information systems themselves are also extremely finite as well as other issues confront treatment and care, such as a lack of health infrastructure and resources to address age-related issues directly. In this case, we chose Africa as a continental-level scenario where older people confront may health and social support issues and where societal and economic changes. The focus on infectious diseases along with poverty,
conflict and development issues has limited the attention given to population ageing in much of the health research conducted in African countries [5]. Yet even as Africa’s estimated population rises to double its current level by the year 2050, growth in cohorts of older people will expand at equal or greater rates [6].

In this scenario, we took a population estimation model for the continent of Africa and applied estimates of dementia prevalence for the whole continent from Alzheimer’s Disease International. The prevalence data was sub-divided for the continent by World Health Organisation region to take into account those areas most affected by factors such as HIV/AIDS and life expectancy variations [7]. The application of the regionalised prevalence rates, by age cohort, to the population data have us an estimation of likely prevalence for the whole continent. This model was then driven down to the sub-national level to include the major administrative geography for each country (states/provinces). Finally, we graphed the resulting data in GE Grapher to produce a Keyhole Markup Language (KML) file that could be opened by anyone with access to Google Earth™.

2. Results

The results for the continent of Africa show how spatial methods can expand on existing knowledge and visualise the results at varying scales. In a situation where we currently have very little reliable scientific data and even censuses can be problematic, this provides us with an enhanced understanding of what patterns may be prevalent at the both the continental, national and sub-national level concurrently. The process of taking a consistent population data set, combining it with current epidemiological understanding and geographic methods builds our understanding of what may be occurring at different scales across Africa. Even if the results are subsequently shown to be wrong, especially as new and better data becomes available, the spatial scientific paradigm informs questions about what is happening where and what we might expect to see when better data is finally produced.

The results for Australia follow a similar pattern in that while available data for population as well as dementia prevalence and incidence are much better than for most African countries, the prevalence data for dementia and sub-types are still basically estimates because no population-level research studies exist. The added dimension of spatial visualisation contributes to our understanding of what potential impact population ageing and dementia are likely to be having on local communities including those in rural and remote regions where specialist service access and provision can vary considerably to those available in urban areas.

The logic of this approach includes providing the capacity for various types of health information (e.g. prevalence and/or incidence data for chronic conditions) to be accessed in a highly visual, multi-scalar environment. Like conventional maps, KML files permit the representation of data about multiple entities in spatial relation to each other. Added benefits are that (1) we can utilise the ‘what-if’ characteristics of modelling temporal prevalence data against existing healthcare facilities to explore the implications for the future and (2) better understand the dynamic relationships that may exist between data sets of varying quality (e.g. prevalence estimates versus incidence data).
3. Discussion

This paper illustrates two important aspects of the role of giscience for the wider, global health informatics environment. Firstly, we can take data known at one order of scale, such as the nation-state, and apply that to a larger scale (i.e. finer geographic detail) in order to explore and examine what we might expect to be happening at much more local levels – even when data is currently lacking, poorly collected or presently not integrated. Secondly, we can use known health information where data quantity and quality are high to help us model environments where data quantity and quality remain low. Thus, applying projected scenarios of disease expression or time-dependent incidence to explore what we would expect to see if our data systems were at the standard necessary for informed interventions, since a key aspect of the role of health
informatics is not only to track what is currently happening but to provide a supporting evidence base for various interventions in complex health environments.

We have briefly examined the potential contribution that giscience offers to the field of health informatics. More specifically our focus is on the advantages of adding giscience concepts, methods and technologies to a globalizing health information environment. Our position is that giscience has already been through many of the changes necessary to make the various spatial sciences able to actively engage with each other and to develop a future spatial environment in which local, national, cultural and semantic/linguistic issues are adequately incorporated into a genuinely global giscience environment. Health informatics is at the beginning this change process and has yet to become spatially integrated. The convergence of many information science approaches in an age of ‘big data’ offers an opportunity to address these outstanding issues. The outcome of this unfolding process will, we believe, lead to a genuinely spatial health informatics paradigm. Given the rising complexity of health systems globally and their multiple scales of interaction, it is our contention that health informatics needs to be spatial in order to meet these emerging challenges.

E-HEALTH – FOR CONTINUITY OF CARE
Studies in Health Technology and Informatics

This book series was started in 1990 to promote research conducted under the auspices of the EC programmes’ Advanced Informatics in Medicine (AIM) and Biomedical and Health Research (BHR) bioengineering branch. A driving aspect of international health informatics is that telecommunication technology, rehabilitative technology, intelligent home technology and many other components are moving together and form one integrated world of information and communication media. The series has been accepted by MEDLINE/PubMed, SciVerse Scopus, EMCare, Book Citation Index – Science and Thomson Reuters’ Conference Proceedings Citation Index.

MIE2014 Preface

On behalf of the European Federation for Medical Informatics and the Turkish Medical Informatics Association, we are proud and happy to invite you to the 25th European Medical Informatics Conference in Istanbul.

The 25th edition of our conference – this is an important anniversary!

Twenty-five is the age of youth, but also the beginning of maturity; it is a time of transition. What better place to celebrate this anniversary than in Istanbul, with its unique history and its fascinating mixture of past and present, of old and new, of religions and cultures.

Information technology and the information sciences have also reached the age of maturity. They are revolutionizing the healthcare system and deeply changing the whole health landscape, as well as health culture. Boundaries are becoming less clear. There is no less well-defined state than the ‘patient’ state. We are sometimes healthy and sometimes sick, but most of the time we are somewhere in between – not so healthy. We should all care about staying healthy. The boundary between health and ill-health is becoming harder to draw. A similar situation exists between prevention and care. While the healthcare system has always predominantly been involved in the management of disease and care, a new trend has appeared, with citizens increasingly involved in wellness and the prevention of ill-health. The quantified self provides the necessary tools to accompany this societal transformation.

The most recent impacts of the emerging field of biomedical informatics will be presented during the MIE 2014 conference. New phenotypical data sources, especially those arising from the ‘healthy world’, which is not usual for the medical sciences, are becoming an important pillar of health determinants, together with genetics, environment and lifestyle. New devices, new sources of data, new roles for all the actors involved are being invented. This point is well illustrated by several reports on Google Glass. The difference between Second Sight glasses, which were available as early as 2002, and Google Glass in 2014 is aesthetic, connectivity and information. The technology was already there, but only the added value derived from connectivity and information have made the glasses an attractive device. Environmental data, lifestyle, bio-captors, phenotypes extracted from EHRs, not to mention all the -omics, constitute the ‘holy grail’ of life science research: a data coverage of the major health determinants. Will we be able to transform the incredibly large amounts of data currently being made available into a clever and smart “Big data”. There are numerous challenges to be dealt with: technological challenges concerning the vast distributed volumes; semantic challenges concerning sources which are heterogeneous over time, of varying quality and reliability, and different contexts; ethical challenges when it comes to balancing public and individual benefits; and legal and societal challenges. All in all, the challenge of Big data questions the whole of society; its values, and its goals – not to mention the results. While this immature technology is promised a bright future, there are already enough reports stating that we need a more reliable methodology, especially when looking at preliminary work such as Google Flu Trends, which were demonstrated to be fast, inexpensive and wrong (Lazer et al., Science. 2014 Mar 14;343(6176):1203–5. doi: 10.1126/science.1248506).
Care process reengineering, the involvement of citizens and patients, continuity of care and health: these are only some of the numerous revolutions taking place. This dynamic is characterized by combined advances in technology and sciences, deep socio-cultural changes, and wide global adoption. And this is precisely the heart of the challenge.

We do not have the option to be spectators; we are actors. Thus, it is necessary to move forward while building an evidence base; making sure that knowledge can be shared and that experiences are reproducible. Amassing evidence and using standards are thus important aspects of our work. It is necessary to keep the ultimate goal of improved healthcare in mind, all the time directing projects and activities towards this goal. The building up of evidence has to be done while retaining some room for disruptive ideas, non-acceptable hypotheses and non-demonstrable theories. It is also our challenge to allow room to all those who think differently, for those who don’t respect the evidence, for those transgressing truth; because truth is a contextual reality, only valid in a certain time and context.

Finally, because health determinants are local, because most health threats are local, and because the process of globalisation tends to lose sight of the personal, we must also be sure to balance truly global science with local experience. To quote Ilias Iakovidis: “Medicine is a global science, and a local art”.

We would also like to acknowledge all our colleagues who devoted their time to the careful review of submissions. They have made it possible for the SPC to select the best papers and posters for inclusion in the proceedings. All submissions are Medline indexed and made available as open access through IOS Press homepage.

Luca Mazzola, Alice Cavazzina, Francesco Pincirolli, Stefano Bonacina,
Paolo Pigatto, Fabio Ayala, Ornella De Pità and Sara Marceglia 58
A Preference-Based Framework for Medical Decision Making 63
K. Sedki, C. Duclos and J.B. Lamy

Reporting of Drug Allergies for Use in a National Decision Support System 68
Knut Bernstein

A Causal Loop Approach to the Study of Diagnostic Errors 73
Shijing Guo, Abdul Roudsari and Artur d’Avila Garcez

Ontology-Based Diagnostic Decision Support in Radiology 78
Charles E. Kahn, Jr.

A Novel Personal Health System with Integrated Decision Support and Guidance for the Management of Chronic Liver Disease 83
Stephan Kiefer, Michael Schäfer, Marco Bransch, Peter Brimmers, Diego Bartolomé, Janie Baños, James Orr, Dave Jones, Maximilian Jara and Martin Stockmann

A New Multiple ANFIS Model for Classification of Hemiplegic Gait 88
Ahmet Yardımcı and Özcan Asılkan

ChronoQuery: Visual Modelling of Temporal Queries for Real-Time Decision Support 93
Raphael W. Majeed, Mark R. Stöhr, Thorsten Brenner and Rainer Röhrig

2. Health and Clinical Information Systems

Plug-and-Play Integration of Dual-Model Based Knowledge Artefacts into an Open Source EHR System 101
Rabea Krexner and Georg Duftschmid

Development and Evaluation of a Memory Clinic Information System 106
Archana Tapuria, Matt Evans, Tony Austin, Nathan Lea and Dipak Kalra

Adverse Drug Event Notification on a Semantic Interoperability Framework 111
Tobias Krahn, Marco Eichelberg, Frerk Müller, Suat Gönül, Gökçe B. Laleci Erturkmen, A. Anil Sinaci and H.-Jürgen Appelrath

Ci4SeR – Curation Interface for Semantic Resources – Evaluation with Adverse Drug Reactions 116
Julien Souvignet, Hadyl Asfari, Gunnar Declerck, Jérémy Lardon, Béatrice Trombert-Paviot, Marie-Christine Jaulent and Cédric Bousquet

EPR-Based, Quality-Related Process Parameters: A Nationwide Assessment 121
Étienne De Clercq, Viviane Van Casteren, Nathalie Bossuyt, Geert Goderis and Sarah Moreels

Cross Hospital Bed Management System 126
S. Abedian, H. Kazemi, H. Riazi and E. Bitaraf

Interpretable Associations Over DataCubes: Application to Hospital Managerial Decision Making 131
Miguel Prados De Reyes, Carlos Molina, Belén Prados and Carmen Peña Yañez

Trust-Based Information System Architecture for Personal Wellness 136
Pekka Ruotsalainen, Pirikko Nykänen, Antto Seppälä and Bernd Blobel

Analysis of Central Enterprise Architecture Elements in Models of Six eHealth Projects 141
Hannu Virkanen and Juha Mykkänen
Multi-Provider Architecture for Cloud Outsourcing of Medical Imaging Repositories
  Tiago Marques Godinho, Luís António Bastião Silva, Carlos Costa and José Luís Oliveira
Semantic Krippendorff’s α for Measuring Inter-Rater Agreement in SNOMED CT Coding Studies
  Daniel Karlsson, Kirstine Rosenbeck Gøeg, Håkan Örman and Anne Randorff Højen
Preservation of Information in Terminology Transcoding
  Nicolas Griffon, Tayeb Merabti, Sylvie Cormont, Sophie Tariel-Laurent, Philippe Massari, Eric Lepage, Amina Chniti, Chrstel Daniel and Stéfan J. Darmoni

Hamish Robertson, Nick Nicholas, Andrew Georgiou, Julie Johnson and Joanne Travaglia
Spatio-Temporal Information and Knowledge Representation of Disease Incidence and Respective Intervention Strategies
Matthew Davis, Stefan Von Cavallar, Kelly L. Wyres, Matthias Reumann, Martin J. Sepulveda and Priscilla Rogers
Novel Algorithms for Improved Pattern Recognition Using the US FDA Adverse Event Network Analyzer
Taxiarchis Botsis, John Scott, Ravi Goud, Pamela Toman, Andrea Sutherland and Robert Ball
14. Posters A

Analysis of Forum Posts Written by Patients and Health Professionals

Amine Abdaoui, Jérôme Aze, Sandra Bringay, Natalia Grabar and Pascal Poncelet

A Randomized Online Health Experiment for a Safer Youth Sexual Behaviour

Elia Gabarron, Luis Fernandez-Luque, Thomas R. Schopf, J. Artur Serrano and Rolf Wynn

Play as a Prevention Strategy: Using a Web App to Teach Youth About STDs

Elia Gabarron, J. Artur Serrano, Thomas R. Schopf, Luis Fernandez-Luque and Rolf Wynn

Instructional Video Reduces Errors in Home Blood Pressure Management

Stine Veje Hangaard, Morten Algj Bonderup, Pernille Heyckendorff Lilholt, Mette Dencker Johansen and Ole Hejlesen

Using Machine Learning to Predict the Smoking Cessation Success Plan in Taiwan

Chih-Wei Huang, Usman Iqbal and Yu-Chuan (Jack) Li

Sex, Gender and Drugs – A Tool for Gender-Aware Drug Prescribing

Emma Huléén, Linnéa Karlsson and Karin Schenck-Gustafsson

What Information About Cardiovascular Diseases do People Search Online?

Ashutosh Jadhav, Stephen Wu, Amit Sheth and Jyotishman Pathak

Enterprise Architecture – Continuing Educational Program

Ritva Karjalainen-Jurvelin, Hannu Virkanen, Virpi Hotti and Juha Mykkänen

PMIR: A Personal Medical Information Recommender

Haridimos Kondylakis, Lefteris Koumakis, Stefan Rüping, Eleni Kazantzaki, Kostas Marias and Manolis Tsisknakis

Usability Evaluation of a Cloud Computing Based Context-Aware Healthcare System

Shu-Lin Wang, Mu-Hsing Kuo, Hung-Ming Chen, Andre Kushniruk, Elizabeth Borycki and Yi-Hsiang Hsu

A Framework of Sharing Patient Profile Information Among Medical Institutions

Yukio Kurihara, Noriaki Nakajima, Haku Ishida, Eizen Kimura, Hiroshi Kondoh, Ken-Ichihiro Shimai, Takeshi Tanaka, Akira Gochi and Kiyomi Ishikawa

Automatic Scanning of Free-Text Entries

Antoine Lamer, Romarie Marcell, Mathieu Jeanne and Régis Logier

Toward an Ontology-Based System for the Automatic Detection of Biases and Weaknesses in Drug Clinical Trial Results

Jean-Baptiste Lamy, Hélène Berthelot, Madeleine Favre, Alain Venot and Catherine Duclos

Combining a Computer Skills Course and Psychoeducation Reduced Symptoms for People Suffering from Social Anxiety

Hildegard Löhr and Rolf Wynn

Emergency Department Information Systems and Workflows – A Pilot Study

Eliza M. Mazlan and Peter A. Bath

Using Concept Co-Occurrences for a Biomedical Facts Acquisition

Jose A. Miñarro-Giménez, Catalina M. Costa and Stefan Schulz
A Community-Based Health Promotion Program Utilizing Web2.0  
Shoko Miyagawa, Yuko Oguma, Yuji Ohgi, Akiko Sato and Shigeo Ohsawa

Pregnant Women’s Perception of Using the Same Knowledge-Base on Medications as Health Care Professionals  
Ulrika Nörby, Birger Winbladh, Tero Shemeikka and Seher Korkmaz

Clinical Evaluation of Nursing Observation Model for the Patients with Ileus  
Miho Omori, Satoko Tsuru, Fumiko Wako and Maiko Mizuki

Pregnant Women in Developing Countries Who Receive Free Cell Phones May Get Help Faster: A Literature Study  
Sunday F. Oyeyemi and Rolf Wynn

Usability Analysis of Two of the Biggest Turkish Public Training and Research Hospitals’ Websites  
Özlem Özkan and Kürşat Çağiltay

Increasing Semantic and Technological Interoperability in Electronic Patient Records  
Rune Pedersen, Rolf Wynn and Gunnar Ellingsen

Context Management in Health Care Apps  
Albert Pla, Beatriz López, Jordi Coll, Natalia Mordvaniuk and Abel López-Bermejo

Cutaneous Melanoma Surveillance by Means of Process Mining  
Christoph Rinner, Reinhold Dunkl, Walter Gall, Karl Fröschl, Wilfried Grossmann, Stefanie Rinderle-Ma, Wolfgang Dorda, Harald Kittler and Georg Duftschmid

User Creativity and Problem Solving in a User-Composable Electronic Health Record  
Yalini Senathirajah, David Kaufman, Suzanne Bakken

Evaluating Design and Usability of a CDSS for Kidney Related Drug Prescribing  
Tero Shemeikka, Elisabeth Törnqvist, Pia Bastholm-Rahmner, Anikó Vég and Seher Korkmaz

Patterns in the Prescription of Drugs to Elderly Delirium Patients and the Impact of Psychiatric Intervention: A Nationwide Cohort Study in Japan  
Sayuri Shimizu and Kiyohide Fushimi

Consulting Forensic Pathologists: A Secure Public Web Application  
Raphael W. Majeed, Hille Mathes, Tolga Nazyok, Mark R. Stöhr, Kai Edler, Reinhard B. Dettmeyer and Rainer Röhrig

Development and Implementation of Perioperative Nursing Processes Through User Software “Syntegra”  

Patient-Empowerment Services for Diabetes Self-Management  
Felix Strohmeier, Ilias Lamprinos and Yildiray Kabak

Integrated Management of Medical Records Using DACS and the Effects on Document Browsing  
Toshihiro Takeda, Naoki Mihara, Shiro Manabe, Yoshie Shimai, Kei Teramoto and Yasushi Matsumura

An Interactive Graphic Reporting System for Venous Ultrasonography  
Anders Thurin
Development of the Modes of Disease Management for Infants and Children
Satoko Tsuru, Masako Fujiiwara, Takanori Motoki, Takanori Minoura,
Tohru Kobayashi, Koichi Tanizaki and Ryoko Shimono
A WSN-Based Physical and Mental Health Monitoring System for Geriatric Facilities
Xiao Yu and Peter Weller

15. Posters B

Mobile Technologies: Expectancy, Usage and Acceptance of Clinical Staff
Urs-Vito Albrecht, Kristin Illiger, Tobias Jungnickel and Ute von Jan
Investigating Physician’s Perceptions About Patient Related Benefits of CPOE
Suleman Atique, Chien-Yeh Hsu, Usman Iqbal and Shakila Zaman
Extracting Imaging Observation Entities in Mammography Reports
Selen Bozkurt and Daniel Rubin
Bridging the Gap: Improving Secondary Use of EHRs with i2b2
Tobias Bronsch, Robert Gött, Theresia Eichner, Christoph Havemann,
Wolfgang Hoffmann, Oliver Heinze, Björn Bergh and Ulrike Kutscha
Transformations Between CDISC ODM and openEHR Archetypes
Philipp Bruland and Martin Dugas
Evaluating Technologies for a Patient Portal
Katharina Chruscz, Nilay Yüksekogul, Peter Pensold, Benjamin Schneider,
Björn Schreitweis, Björn Bergh and Oliver Heinze
Visualising Topic Networks in Infection Control Using Word Vector Analysis
Jeroen S. de Bruin, Jose A. Miñarro-Giménez, Matthias Samwald
and Oscar Marin Alonso
Group Differences in Sites of Metastases After Being Diagnosed with Breast Cancer
Arihito Endo, Takeo Shibata and Hiroshi Tanaka
Need for Preventing Incorrect Intravenous Bolus Orders in ePrescribing Systems
E. Eschmann, S. Karlen, M. Schneemann and J. Blaser
Quality Assurance: Automatic Detection of Inappropriate Prescriptions in the Elderly
Laurie Ferret, Jean-Baptiste Beuscart, Grégoire Ficheur,
Renaud Perrichon and Regis Beuscart
Travellers’ Health Mobile Applications
Parisis Gallos, Dafni Kaitelidou, Emmanouil Velonakis and John Mantas
Documenting the Health Care Processes in the Intensive Care Unit
Mira Hercigonja-Szekeris, Mario Somék, Snježana Čukljeck and Boris Ilić
Participation and Mode Preferences in a Questionnaire Study
E. Kilsdonk, E. van Dulmen-den Broeder, L.C. Kremer,
M.M. van den Heuvel-Eibrink, F.E. van Leeuwen, M.H. van den Berg
and M.W. Jaspers
Computational Biology Approaches in a Research Laboratory for Understanding Complex Diseases
Victoria Lopez Alonso, Fernando Martin-Sanchez
and Guillermo Lopez-Campos
Developing a Model of the Care Management for the Elderly with Dementia
Maiko Mizuki, Satoko Tsuru, Miho Omori and Fumiko Wako
Task Analysis for Patient-Oriented Medication Information Management
Juha Mykkänen, Irmeli Luukkonen, Eija Kivekäs and Kajsa Saranto
Development of A Needle Insertion Manipulator Using Lego Mindstorms
Hirenkumar Nakawala, Peter Weller and Dympna O’Sullivan
Dynamic Adaptation of EHR Structure for Automated Compliance Evaluation
Fulvio Patara and Enrico Vicario
Hospital Alliance and Minimum EMR Data in Mobile Device for the Disaster
Tomotaro Sato, Shinji Kishi, Hiroshi Watanabe, Itsuko Asada,
Yukimitsu Okamura, Yoshikazu Kamiya and Shigeru Yoshida
Heuristics to Support User-Centered Design Research for e-Health
Applications with Older Adults
Emilija Stojmenova and Dejan Dinevski
A Nationwide Remote EHR Backup Project in Anticipation of Large-Scale Disaster in Japan
Katsuya Tanaka, Takashi Noguchi, Ryuichi Yamamoto, Kengo Miyo and Kazuhiko Ohe
Ethical Impacts of Tele-Nursing Applications on the Patient Care
Esra Uslu and Hafize Ozturk Turkmen
Visualizing the Illness Trajectory of the Elderly with Respiratory Diseases
Fumiko Wako, Satoko Tsuru, Miho Omori and Maiko Mizuki
Nearly All Students and Patients Use the Internet to Search for Health Information: Results from a Scandinavian Study
Rolf Wynn, Gunn Pettersen, Jan Rosenvinge, Svein Bergvik and Oddgeir Friborg
A Model for Data Integration into a Regional Research Platform
Nilay Yüksekogul, Katharina Chruscz, Björn Schreiweis, Benjamin Schneider, Dominik Ose, Björn Bergh and Oliver Heinze
Nursing Students’ Technology Use Behaviors and Innovativeness Towards Mobile Learning
Deniz Özel and Neşe Zayim
An IT Platform for Systems Medicine
Matthias Ganzinger, Hartmut Goldschmidt and Petra Knaup
INTERACCT: Serious Game Performance as Medical Condition Indicator
Konrad Peters, Fares Kayali and Helmut Hlavacs
Exploration of Novel Data Sources in Electronic Infection Detection
Jeroen de Bruin, Simone Sauter, Christian Schuh and Walter Seeling
Designing a Competency-Based MOOC to Facilitate EMR Usage
D. Papakonstantinou, M. Poulymenopoulou, F. Malamateniou and G. Vassilacopoulos
Systematic Ski Injury Registration Using a Digital Platform
J.C. Jeppesen and S.Y. Yayilgan
Future Trends in Picture Archiving and Communication System (PACS)
Mona Al-Hajeri and Malcom Clarke
NLP-Based Information Retrieval from Vigilance Reporting Databases
Charalambos Tsirmpas, Athanasios Anastasiou, Maria Haritou and Dimitrios Koutsouris
An Algorithm Enhances Fasting Plasma Glucose Based Diabetes Screening Using Simple Patient Information
Simon Lebech Cichosza, Mette Dencker Johansen and Ole Hejlesen

A Semantic Interoperability Framework for Facilitating Cross-Hospital Exchanges
Amina Chniti, Lamine Traore, Sajjad Hussain, Nicolas Griffon, Stefan Darmoni, Jean Charlet, Eric Sadou, David Ouagne, Eric Lepage and Christel Daniel

An Extensive Database of the Correlations Between Early life Events and Ageing Outcomes
Anastassios Tagaris, Athanasios Anastasiou, Yiannis Makris, Keith Grimaldi and Dimitrios Koutsouris

The Need for Standardization of Allergy Information in Electronic Medical Record Among Japanese Hospitals
Masaharu Nakayama and Ryusuke Inoue

A Medical Intelligent Module as Part of a Tele-Monitoring and Diagnostic System Targeting Fall Prevention
Anastassios Tagaris, Panagiotis Vartholomaios, Charalambos Tsirmpas, Ioanna Tsakou, Stelios Pantelopoulos, Caroline Barelle, Eleftheria Vellidou and Dimitrios Koutsouris

TrendMD: An Academic Content Discovery Platform
Paul Kudlow and Gunther Eysenbach

Reduce Medication Errors by Applying a Probabilistic Model: A Pilot Study
Usman Iqbal, Phung-Anh (Alex) Nguyen, Shabbir Syed-Abdul, Chih-Wei Huang, Yu-Chuan (Jack) Li and Wen-Shan Jian

Modeling Requirements for Cohort and Register IT with 3LGM
Sebastian Stäubert, Ulrike Weber, Claudia Michalik, Jochen Dress, Sylvie Ngouongo, Jürgen Stausberg, Alexander Strübing and Alfred Winter

Adherence to Prescribed Cycling Speed in Remotely Controlled iBikE System
Joseph Finkelstein and In cheol Jeong

Monitoring System of Disease Structure by Integrating HIS and “AEROS” in Japan
Takayuki Hoshino

Evaluation of a Decision Support System for Selecting Appropriate Radiological Test
Utku Senol, Mehmet Samar, Ozgur Tosun, Ali Unal and Mutlu Kartal

Mobile Learning Readiness of Nursing Students
Deniz Özel and Neşe Zayim

Game Theory and Radiology
Utku Senol and Ozgur Tosun

rs10739592 Is a New Candidate Loci for Type 2 Diabetes Risk in Men
Husamettin Gul, Yeşim Aydın Son and Cengizhan Açıkel

What User Characteristics Influence Privacy Expectations from Hospital Information System
Güney Gürsel, Neşe Zayim, Kemal Hakan Gülkesen and Osman Saka
Evaluation of a Mobile EPR System for a New Healthcare Professional in Germany

Sebastian Ahrndt, Andreas Rieger, Elif Eryilmaz and Sahin Albayrak
