Research output

Formal methods: practical applications and foundations: Editorial

On privacy and accuracy in data releases

Introduction to the special section on quantitative evaluation of systems (QEST 2018)

Correctness by construction for probabilistic programs

Failure Mode Reasoning in model based safety analysis

Reasoning with failures

The Science of Quantitative Information Flow

Program algebra for quantitative information flow

An axiomatization of information flow measures

Abstract Hidden Markov Models: a monadic account of quantitative information flow
Generalised differential privacy for text document processing

Proving that programs are differentially private

Categorical information flow

Experiments in information flow analysis

Preface

The thousand-and-one cryptographers

Schedulers and finishers: on generating and filtering the behaviours of an event structure

A new proof rule for almost-sure termination

An algebraic approach for reasoning about information flow

Conditioning in probabilistic programming

Preface
Processing text for privacy: an information flow perspective

Privacy in elections: How small is "small"?

Algebra for quantitative information flow

Formal analysis of the information leakage of the DC-nets and crowds anonymity protocols

Reasoning about distributed secrets

Probabilistic rely-guarantee calculus

Axioms for information leakage

Program refinement, perfect secrecy and information flow

Schedulers and finishers: On generating the behaviours of an event structure

Conditioning in Probabilistic Programming

Abstract hidden Markov models: a monadic account of quantitative information flow
**Hidden-Markov program algebra with iteration**

**Logic for programming, artificial intelligence, and reasoning: 20th international conference, LPAR-20 2015 Suva, Fiji, November 24–28, 2015 proceedings**

**Additive and multiplicative notions of leakage, and their capacities**

**Hopscotch - reaching the target hop by hop**

**Operational versus weakest pre-expectation semantics for the probabilistic guarded command language**

**Abstractions of non-interference security: Probabilistic versus possibilistic**

**Abstract channels and their robust information-leakage ordering**

**Towards a formal analysis of information leakage for signature attacks in preferential elections**

**An event structure model for probabilistic concurrent Kleene algebra**

**Prinsys - On a quest for probabilistic loop invariants**

**Probabilistic concurrent Kleene algebra**
Statistical model checking of wireless mesh routing protocols

Preface: Special issue QFM 2009

A Kantorovich-monadic powerdomain for information hiding, with probability and nondeterminism

A process algebra for wireless mesh networks

A rigorous analysis of AODV and its variants

Automated analysis of AODV using UPPAAL

Operational versus weakest precondition semantics for the probabilistic guarded command language

Compositional refinement in agent-based security protocols

Model exploration and analysis for quantitative safety refinement in probabilistic B

Continual and explicit comparison to promote proactive facilitation during second computer language learning

On probabilistic Kleene algebras, automata and simulations
Towards an algebra of routing tables

An expectation transformer approach to predicate abstraction and data independence for probabilistic programs

Compositional closure for Bayes risk in probabilistic noninterference

Linear-invariant generation for probabilistic programs: Automated support for proof-based methods

The thousand-and-one cryptographers

Security, probability and nearly fair coins in the cryptographers' café

Sums and lovers: Case studies in security, compositionality and refinement
Probabilistic guarded commands mechanized in HOL

Memoryless strategies for stochastic games via domain theory

An elementary proof that Herman's Ring is \( \Theta(N^2) \)

Probabilistic Guarded Commands Mechanized in HOL

Abstraction and refinement in probabilistic systems

Abstraction, refinement and proof for probabilistic systems

Compositional specification and analysis of cost-based properties in probabilistic programs

Development via refinement in probabilistic B - Foundation and case study

Towards automated proof support for probabilistic distributed systems

Cost-based analysis of probabilistic programs mechanised in HOL

Deriving probabilistic semantics via the 'weakest completion'

Almost-certain eventualities and abstract probabilities in the quantitative temporal logic qTL

Probabilistic invariants for probabilistic machines

Probabilistic termination in B

Programming Methodology
Quantitative program logic and expected time bounds in probabilistic distributed algorithms

Games, probability, and the quantitative μ-calculus qMμ

Cost analysis of games, using program logic

A generalisation of stationary distributions, and probabilistic program Algebra

Partial correctness for probabilistic demonic programs

Almost-certain eventualities and abstract probabilities in quantitative temporal logic

Demonic, angelic and unbounded probabilistic choices in sequential programs

A Generalisation of Stationary Distributions and Probabilistic Program Algebra

Quantitative program logic and performance in probabilistic distributed algorithms

Reasoning about efficiency within a probabilistic μ-calculus

Probabilistic models for the guarded command language

Unifying wp and wlp

Probabilistic Predicate Transformers

Refinement-oriented probability for CSP
Software, who needs it?

A question of identity

Finitely generated non-Hopf modules

Enumerating finite groups
